

• DOES THE PROCEDURE HURT? •

No. The skin is numbed and the injections are made with very tiny needles. The procedure is very tolerable with minimal discomfort and little downtime.

• IS THE PROCEDURE SAFE? •

Yes. PRP is a natural substance from the patient's own body and does not produce undesirable, allergic responses. There have been no reported serious or troublesome complications from PRP Therapy. Practitioners at Contemporary Health Center are skilled, trained injectors that are authorized to perform this patented procedure.

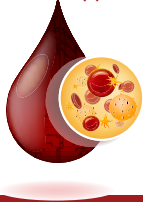

RESULTS:

The treatment is not a replacement for implants and won't double your cup size overnight, but it can reshape and round out your bust. It also helps make nipples rosier, perkier, and more sensitive. Additionally, the VBL has proven to be effective at improving the look of breast implants that have rippled, correcting inverted nipples, rejuvenating crepey chest skin, and erasing stretch marks.

• WHAT DOES THE VAMPIRE BREASTLIFT® COST? •

Cost of treatment is 1 for \$1800 or 3 for \$3400.

*Vampire NippleLift is also available to treat nipple inversion, loss of sensitivity and enhance nipples.

NATURALLY AGELESS BREASTS

· DISCOVER THE SECRET TO AGELESS BREASTS ·

The Vampire BreastLift® is a patented, nonsurgical, all natural, no downtime form of breast rejuvenation. Shape, lift, sensitivity and smooth texture are qualities of the breast that women often lose as they age. The **Vampire BreastLift®** can provide more sensitivity, healthier tissue, smooth out irregularities of the breasts and correct inverted nipples.

· WHY CHOOSE THE VAMPIRE BREASTLIFT®? ·

Similar to the **Vampire Facelift®**, this procedure uses Platelet Rich Plasma (PRP) from the patient's own blood injected artfully to produce the most tissue growth, rejuvenation and reshaping.

STEPS OF THE VAMPIRE BREASTLIFT® PROCEDURE:

STEP 1: A blood sample is drawn from the arm, the same way it would be for a normal blood test.

STEP 2: Next, the blood is centrifuged and Platelet Rich Plasma is isolated. The healing and growth factors found in the patient's own blood are activated with a physiologic solution and injected back into the breast.

STEP 3: Through the use of topical anesthetics and a very small needle, the procedure is virtually painless.

STEP 4: The result is improved texture, cleavage, sensitivity and shape of the breasts.

ADVANTAGES OF THE VAMPIRE BREASTLIFT®:

- 30-minute nonsurgical procedure
- All natural with natural looking results
- Virtually painless with no downtime
- No scars - It minimizes scars!
- No loss of sensitivity - It increases sensitivity!
- Effects may last up to 2 years or longer

· WHAT IS THE VAMPIRE BREASTLIFT®? ·

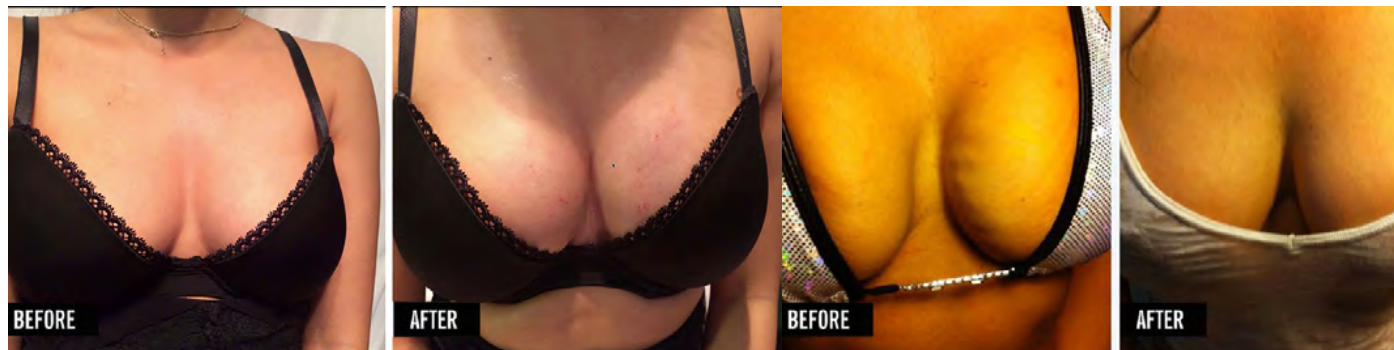

The **Vampire BreastLift®** is ideal for women who are not looking to dramatically change the size of their breasts, those who have implants with visible rippling or an unnatural appearance, or those with breast or nipple irregularities. And it is an excellent option for women who cannot afford to take time off from work to recuperate from an aggressive surgical procedure like a breast lift or breast implants. The procedure aims to provide increased cleavage, sensation, smoothness and lift.

RESULTS OF THE VAMPIRE BREASTLIFT®:

- Shapelier breasts
- Natural rejuvenation
- Smoother skin and reduced wrinkles
- Increased nipple sensation
- Smooth ripples from prior breast augmentation surgery
- Younger appearance through more blood flow
- Reverse inverted nipples

The best part of this procedure is that it's helping restore a more natural beauty. **The Vampire Breast Lift®** works at the stem cell level, generating new tissue. The procedure rejuvenates and brings sensation back into the breast, areola and nipples.

THE EFFECTS OF THE PROCEDURE IMPROVE FOR 2 TO 3 MONTHS AND LAST FOR AT LEAST 1 TO 2 YEARS!

· IS THE VAMPIRE BREASTLIFT® RIGHT FOR ME? ·

If you are looking to restore the shape and natural beauty of your breasts without overwhelming cost or time off work, then you should consider the **Vampire BreastLift®**.

· WHAT IS THE RECOVERY FROM THE VAMPIRE BREASTLIFT®? ·

There is virtually no recovery from this procedure.

Some may have small bruises, minimal swelling, tenderness or redness at the injection sites. This resolves naturally over the days following treatment.

We advise that the area not be washed and that no products be used for 6+ hours after treatment to allow the PRP to absorb.

Aspirin, Advil, Aleve, corticosteroids, anti-inflammatory drugs, and ibuprofen are to be avoided, if possible, for at least 1 week after treatment. These medications are thought to inhibit the inflammatory phase of healing that is a necessary part of PRP therapy.

· IS THERE ANY DOWNTIME? ·

No. Anyone can have this procedure during the day and go out that evening.
